Inspection Summary

Areas Inspected: Included a review of the Security Plan; Security Organization; Physical Barriers; Access Controls; Central Alarm and Communications System; Keys, Locks and Combinations; Detection Aids; Response Controls; Testing and Maintenance; Records and Reports; and Reports of Incidents. The inspectors also reviewed the licensee's action on previous inspection findings and performed independent inspection effort. The inspection involved 50 inspector-hours onsite by two NRC inspectors including two

inspection hours accomplished during offshift periods. The inspection began during the midnight shift.

Results: The licensee was found to be in compliance with NRC requirements within the eleven areas examined during the inspection except for the following one item:

Some vital area barriers were not properly maintained. This item was adequately corrected prior to the conclusion of the inspection and the corrective action should prevent recurrence.
