Re: Oconee Unit 1  
Docket No. 50-269

Dear Mr. Giambusso:

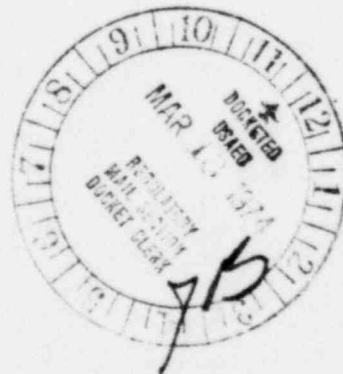

It is requested that Oconee Technical Specification 3.5.2.5-e, "Control Rod Positions," be waived on March 14, 1974 on Oconee Unit 1. This waiver is requested to permit verification of correlations developed for the calibration of out-of-core detectors prior to the Unit 1 rod swap. This verification program will require operation outside the range of power axial imbalance limits established for LOCA peak Kw/ft considerations. The verification program will be performed at power levels less than 75 percent full power; quadrant tilt will be held to 4 percent or less while the imbalance limits are exceeded.

Very truly yours,

A. C. Thies

ACT:vr

APR 29 1974

REQUEST FOR ADDITIONAL INFORMATION  
CONCERNING SPECIAL NUCLEAR MATERIALS AND  
BYPRODUCT MATERIALS

1.1.1 Special Nuclear Material

- 1) Describe the features of the survey instrument calibration room which ensure safe handling of the calibration sources and which reduce inadvertent or unnecessary exposures to personnel.

1.1.2 Byproduct Materials

- 1) How will access to sealed sources be controlled?
- 2) Will there be written procedures controlling availability and use of these sources?

3.2 Procedures

- 1) Describe the procedures which control access to sources.
- 2) Describe the procedures which ensure safe handling and use of the sources so that personnel exposure resulting from their use will be ALAP.
