WASHINGTON, D.C. 20545

DOCKET NO: 50-270 and 50-287

DATE:

APPLICANT: Duke Power Company

FACILITY: Oconee Units 2 and 3

SUMMARY OF SITE VISIT TO OCONEE  
June 29, 1973

The purpose of the visit was to review the status of plant redesign and modifications resulting from the evaluation of postulated high-energy line ruptures external to the containment prior to completing the staff's Safety Evaluation Report for Oconee Units 2 and 3. The opportunity was taken to tour the critical areas of the facility relative to this evaluation.

During the visit plant modifications were underway and the applicant confirmed that all required modifications will be completed on Unit 3 prior to startup and shortly after scheduled startup on Unit 2. Unit 2 fuel loading date is now estimated by the applicant to be September 1, 1973. The applicant further confirmed that he will establish special interim measures and conduct a special inservice inspection program for critical areas until the modifications to Unit 2 are complete.
