J. M. Hendrie, Deputy Director for Technical Review  
Directorate of Licensing

TECHNICAL ASSISTANCE REQUEST - OCONEE UNIT 1 TECHNICAL SPECIFICATIONS -  
RADIOACTIVE RELEASES

Technical assistance from Technical Review is requested on the following  
reactor plant.

Name: Oconee Unit No. 1  
Status: Operating License  
Docket: 50-269  
Branch: PWR-4  
Project Leader: I. A. Peltier  
Review Branches: Effluent Treatment Systems, Accident Analysis, Site  
Analysis

The Oconee Unit 1, Duke Power Company, has a B&W nuclear steam supply system. The plant was designed by Duke and Bechtel. It has undergone Licensing and ACRS review and is scheduled for licensing in January 1973. However, the technical specifications were prepared prior to proposed Appendix I guidance. The Assistant Director for Site Safety has recommended (see his memo to DeYoung dated May 25, 1972) that the technical specifications be revised to conform to the versions which incorporate Appendix I requirements. The purpose of this request is to obtain Technical Review assistance in preparing these specifications and in reviewing them in their final form.

Duke has been provided a copy of the Maine Yankee technical specifications which we believe to be an acceptable version incorporating Appendix I requirements. Enclosed with this request are copies of the current Oconee specifications and the Maine Yankee specifications. Please provide us with specific guidance regarding the required revision so we can pass it on to Duke.

The technical specifications must be approved and printed in final form no later than August 30, 1972 to meet our licensing schedule and therefore, it is urgent that we be specific in our guidance to Duke since time does not permit generalities that may result in a number of turn-around reviews. Please advise the project leader as soon as possible as to when to expect specific guidance so the Orange Book Schedules can be updated.

R. C. DeYoung, Assistant Director  
for Pressurized Water Reactors  
Directorate of Licensing
