Re: Oconee Nuclear Station
Unit 2
Docket No. 50-270

Dear Mr. Giambusso:

Oconee Nuclear Station Technical Specification 4.4.2.4 details a program for the surveillance of the Reactor Building liner plate. This program has recently been completed for Oconee 2. The purpose of this letter is to provide a summary of the results of the surveillance, in accordance with Technical Specification 6.6.3.5.

On June 13, 1973, prior to the initial (preoperational) Integrated Leak Rate Test and Structural Integrity Test, selected accessible areas of the Oconee 2 Reactor Building liner plate were visually examined to determine the location of inward deformations and the location of strain concentrations. No such deformations or concentrations were observed. Following the completion of the initial Reactor Building pressure tests, the liner plate was re-examined on June 22, 1973. Again, no areas of inward deformation or strain concentration were observed. A final inspection of the liner plate was performed on October 4, 1974 with no adverse indications being noted.

As no corrective actions have been necessary with regard to this matter the Oconee 2 liner plate surveillance program has been discontinued as per Technical Specification 4.4.2.4.4.

Very truly yours,

A. C. Thies
