Power Corporation herewith certifies that all information contained herein and any related discussion of same is true and accurate to the best of its knowledge and belief. There exists a corporate commitment to the people of Florida (and particularly its service area) that adequate reliable and economical electric service will be provided with minimal environmental impact, in the public interest.

Florida Power Corporation is a private investor owned electric utility encompassing a 23 county area of west central and northern Florida serving at present over 450,000 industrial, commercial and residential customers. The company, headquartered in St. Petersburg, Florida has 2,760 permanent employees and operates eight steam/electric generating plants, oil fired with a net generating capacity of 2,292,000 kw. Florida Power Corporation is regulated by the Florida Public Service Commission, the State of Florida, Local and County Governments and the Federal Government.

CONCLUSIONS

It is Florida Power Corporation's conclusion that the balance of this statement effectively demonstrates that:

1. The continued construction of the Crystal River Unit #3 during the prospective environmental review period will not give rise to any significant adverse affect on the local environment. Any possible adverse impact effected during the prospective environmental review period would be short term, and redress of any such effects can reasonably be accomplished during the remaining 24 months of the scheduled construction period.
