MEMORANDUM FOR: L. B. Higginbotham, Assistant Director, Division of  
Fuel Facility and Materials Safety Inspection, IE

FROM: A. B. Davis, Chief, Fuel Facility and Materials  
Safety Branch

SUBJECT: CRITERIA FOR EVALUATING FISH IMPINGEMENT - DAVIS-BESSE I

In reviewing the attached letter from Ohio State University to the Toledo Edison Company, we are concerned about the adequacy of the trigger level specified and what it represents in the number or weight of the six species listed. In addition, the trigger level will have a different impact on the fish population in the lake as a whole as opposed to the vicinity of the site.

Please forward the enclosures to the Operating Reactors Branch No. 4 (DOR) and to the Environmental Specialists Branch (DSE), request them to review the fish impingement criteria referred to therein, and report the results of that review back to this office.
