EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

At 1529 hours on 6/5/78, the decay heat flowrate was reduced to less than 2800 gpm to lower the reactor water level for the purpose of performing maintenance on core flood line discharge check valve CF. This placed the unit in the Action Statement of Technical Specification 3.9. There was no danger to the health and safety of the public or unit personnel. Adequate cooling existed even at the lower decay heat flowrate. (NP-33-78-75)

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

The cause of this action was a planned reduction of water level to repair the bonnet leak on core flood check valve CF30. The cause of the bonnet leak was component failure of the bonnet gasket. A new bonnet gasket was installed on CF30. At 1325 hours on 6/6/78, the reactor water level was raised and decay heat flow was returned to  $\geq$  2800 gpm.
