Docket No. 50-346  
November 25, 1975

Mr. A. Schwencer, Chief  
Light Water Reactors Branch 2-3  
Division of Reactor Licensing  
U.S. Nuclear Regulatory Commission  
Washington, D.C. 20555

Dear Mr. Schwencer:

On November 10, 1975, Mr. E. C. Novak, Toledo Edison Davis-Besse Unit 1 Project Engineer, related by phone the following schedule changes to your Mr. L. Engle, Project Manager:

Schedule

<u>Activity</u>	<u>Previous</u>	<u>Current</u>
Hot Functional Testing	December 15, 1975	March 15, 1976
Fuel Loading	April 1, 1976	June 15, 1976
Commercial Operation	September, 1976	September, 1976

This letter confirms the above Davis-Besse Nuclear Power Station Unit 1 schedule changes. These changes have also been reported to Region III representatives as part of the Construction Status Report (Yellow Book) update in October.

While no one dominant cause for the schedule delay can be identified, several factors have contributed to overall schedule lag:

1. Design refinements continue to be necessary to fine tune systems' designs to regulatory design criteria interpretations and to resolve field impacts of resultant design iterations.
2. Delivery of components, particularly valves, necessary to finalize systems continue to be delayed.
3. Field productivity lags due to rework necessary to accomplish design refinements, and due to degree of quality assurance documentation necessary to meet NRC nuclear standards.

Sincerely,

15-161
