SUPPLEMENTAL REPORT TO THE REQUEST FOR EXEMPTION BY THE TOLEDO EDISON COMPANY ET AL - DAVIS BESSE NUCLEAR POWER STATION, DOCKET NO. 50-346

At our request, The Toledo Edison Company has submitted the data and information used to establish the 1974 winter forecast generating capacity and reserve for the Central Area Power Coordination Group (CAPCO) and Toledo Edison Syteta with and without the Davis-Besse Nuclear Power Station generating capacity. These data show a deficit between load demand and generating capacity of about 250 MWe can be expected in December 1974 and provide the basis for supporting the public need for energy to be produced by the proposed Davis-Besse Nuclear Power Station.

(Signed) HLP
Harold L. Price
Director of Regulation
