

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D. C. 20555

JUN 13 1980

DOCKFT NO.: 70-2609

APPLICANT: Commonwealth Edison

FACILITY: La Salle County Nuclear Power Station, Unit 1

SUBJECT: LICENSE AMENDMENT APPLICATION DATED APRIL 3, 1980

Background

Commonwealth Edison is licensed under NRC Materials License No. SNM-1802 for the receipt and storage of fuel and accessories for eventual use in the La Salle County Nuclear Power Station, Unit 1. The license is scheduled to expire September 30, 1980. By application dated April 3, 1980, the licensee has requested an extension of the expiration date to June 30, 1981.

Discussion

The licensee advises that because of construction and licensing delays associated with the project, the NRC has extended the construction permit so that the latest completion date is now June 30, 1981. It is noted that extending the license expiration date does not affect the radiological safety, nuclear safety or other parameters on which the issuance of the license was based.

Recommendation

On the basis of the above, I recommend that the license extension, as requested by Commonwealth Edison, be approved.
