EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

0 2 | During a routine plant startup w.th reactor power at 15% it was determined that steam |
0 3 | generator #1 outlet steam pressure was significantly higher than the other two steam |
0 4 | generator pressures. It was postulated that the #1 main steam non-return valve failed |
0 5 | to fully open. Plant was taken off line, NRV fully closed, and cooled down to |
0 6 | necessitate valve repair. The health and safety of the public was not affected. |

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1 0 | The cause of this occurrence was material failure in the heat affected zone of the |
1 1 | guide to disc weld. Corrective action was to weld both pieces and provide post weld |
1 2 | heat treat as per ASME code. The remaining two NRV valves were also inspected and |
1 3 | determined to be satisfactory. |
