	EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)
/0/2/	/ On June 20, 1980 with the unit at Startup condition, one of the main steam /
/0/3/	/_ flow transmitters was found to be inoperable. Since there has been no /
10/4/	/_ accumulation of fission products due to reactor power being limited to <5% /
/0/5/	/ and since the other main steam flow transmitter for that steam generator was /
/0/6/	/ operable, the health and safety of the public were not affected. This is /
/0/7/	/contrary to TS 3.3.2.1 and reportable by T.S. 6.9.1.9.a. /
