Dear NRC 6-8-80 Re PRM-140-2
You may not know that in North Carolina
the reserves to pay Price-Anderson Est. retro-
spective premiums are being paid
by consumers. The \$1.7 million reactor yr
premium for only \$55 M of replacement
power insurance for nuclear indicates the
power CO's themselves (i.e. mutual insurance)
think an accident like TMI likely within 2 years.
What should ratepayers pay for Price-Anderson
premiums? I think the NRC should require
that a nuclear insurance available up to \$50
million for whatever the Price-Anderson limit is.
Should be for insurance paid for by
power CO stockholders, not ratepayers. (Suggest
minimum 200 miles as PRM-140-2 suggests)
