

**Wisconsin Electric** POWER COMPANY  
231 W. MICHIGAN, P.O. BOX 2046, MILWAUKEE, WI 53201

July 7, 1980

Mr. Harold R. Denton, Director  
Office of Nuclear Reactor Regulation  
U. S. NUCLEAR REGULATORY COMMISSION  
Washington, D. C. 20555

Attention: Mr. Robert A. Clark, Chief  
Operating Reactor Branch No. 3

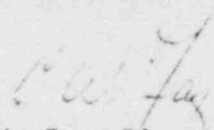

Gentlemen:

DOCKET NO. 50-266  
STEAM GENERATOR 90 EFPD INSPECTION  
POINT BEACH NUCLEAR PLANT UNIT 1

**This letter is to advise you that** in accordance with the "Modification of November 30, 1979 Order" dated April 4, 1980, we will be taking the Point Beach Nuclear Plant Unit 1 off-line on July 25, 1980, for a scheduled outage to conduct the hydrostatic tests and inservice inspections required within 90 effective full power days (EFPD) from the date of the Order. An eddy current examination of 100% of the tubes in both steam generators will be conducted during this outage. Three percent of the tubes will be inspected over their entire length with the remaining tubes being inspected to the first support plate.

Pending the results of this planned inspection, and your written notification regarding the acceptability of the tests, we would propose that the unit be permitted to resume operation for an additional 90 EFPD under the same conditions of the November 30, 1979 Confirmatory Order and the January 3, 1980 modification of that Order. Should you have any questions regarding this schedule or our proposed eddy current inspection program, please contact us.

Very truly yours,

  
C. W. Fay, Director  
Nuclear Power Department

Copy to NRC Resident Inspector,  
Point Beach Nuclear Plant  
C. F. Riederer, PSCW  
Peter Anderson, WED  
Joan Estes, LSCFSE
