Attention: Mr. J. P. O'Reilly, Director

Dear Mr. O'Reilly:

SUBJECT: Grand Gulf Nuclear Station  
Units 1 and 2  
Docket Nos. 50-416/417  
File 0272/15525/15526  
PRD-80/21, Status Report,  
Defects in Diesel Generator  
Control Panels  
AECH-80/110

On April 22, 1980, Mississippi Power & Light Company (MP&L) notified Mr. F. Cantrell of your office of a Potentially Reportable Deficiency (PRD) at the Grand Gulf Nuclear Station (GGNS) construction site. The deficiency concerns defects that were detected in diesel generator control panels. This deficiency was reported to the NRC pursuant to 10CFR21 by the Morrison-Knudsen Company. The panels were manufactured by International Control and Switchgear Company (ICSC).

Morrison-Knudsen conducted an onsite inspection on May 5 and 6, 1980, to determine the applicability of this deficiency to GGNS. The results of that inspection have not, as yet, been provided to MP&L.

Our final report and determination on the reportability of this matter is now scheduled for submittal on or before June 25, 1980.

Yours truly,

for J. P. McGaughy  
Assistant Vice President  
Nuclear Production
