Docket No. 50-320-

JUN 26 1980

Mr. A. E. Wasserbach
 Box 2308 W. Saug. Road
 Saugerties, N.Y. 12477

Dear Mr. Wasserbach:

Enclosed is a copy of the draft "Environmental Assessment for Decontamination of the Three Mile Island Unit 1 Reactor Building Atmosphere," NUREG-0662, Addendum 2.

You also asked about site monitoring activities during krypton-85 releases. The NRC will use real-time environmental and meteorological data during purging operations at Three Mile Island, Unit 2. This information, which will be determined at least hourly by mobile radiation monitoring personnel located in the predicted downwind trajectory, will be used to assure that radiation dose rates are minimized and maintained within limits prescribed in the facility operating license. A detailed description of radiological environmental monitoring programs to be used during purging operations is contained in Section 8.0 of the "Final Environmental Assessment for Decontamination of the Three Mile Island Unit 2 Reactor Building Atmosphere," NUREG-0662, Volume I, May 1980. A copy of Section 8.0 is enclosed for your information.

I trust that this information adequately responds to your question.

Sincerely,

Bernard J. Snyder, Program Director
 Three Mile Island Program Office
 Office of Nuclear Reactor Regulation

Enclosures:

1. Draft NUREG-0662, Add. 2
2. Section 8.0 of Final NUREG-0662
