

40-8380

June 13, 1980

Dennis Morrow, District Engineer
Land Quality Division, District 4
30 East Grinnell Street
Sheridan, Wyoming 82801

Dear Mr. Morrow:

Re: Nine Mile Lake, Pattern 4 Preliminary Water Quality

Attached are copies of the preliminary water quality data for Pattern 4. It should be emphasized that the data presented is preliminary; some analysis results are lacking at this time and outliers have not been removed. In addition, pre-mining sampling of some wells is continuing at this time. Upon completion of background sampling and receipt of all analytical results, a revised table presenting pre-mining water quality will be submitted.

Please note that upper control limits for well M-54 have been established for pH, bicarbonate, uranium and vanadium only. Conductivity, chloride and calcium levels have continued to fluctuate, invalidating use of these parameters for excursion control/detection. All other wells are representative of typical water quality found at the Nine Mile site.

If you have any questions about the water quality data for the carbonate test pattern, please give me a call.

Sincerely,

Michael R. Neumann

* Analysis Pending

1 UCL for Ca, Cl, and Conductivity cannot be established due to severe fluctuations.

2 Data represents one sampling only

$$\text{UCL} = \bar{x} + 2(s) + 10\% \bar{x}$$
