POOR
ORIGINAL

Gentlemen:

The U.S. Atomic Energy Commission, in carrying out its responsibility to guard against loss or diversion of strategically important nuclear materials in the interest of national security, has established, in Sections 70.34, 30.54, and 40.54 of 10 CFR Parts 70, 30, and 40, respectively, requirements for submission to the AEC of material transfer reports whenever certain transfers of special nuclear material, source material, or tritium occur. Reports are required for a transfer of 1 gram or more of contained U-233, U-235, or Pu in special nuclear material, 1,000 kilograms or more of uranium or thorium in source material, or 1,000 curies or more of tritium. In addition, Sections 70.35, 30.55, and 40.64 of 10 CFR Parts 70, 30, and 40 require semiannual statements of special nuclear material and tritium inventories, and annual statements of source material inventories from licensees authorized to possess more than 350 grams of contained special nuclear material, more than 10,000 curies of tritium, or more than 1,000 kilograms of source material, respectively.

The AEC utilizes an electronic data processing system to record these reports. All licensees subject to these reporting requirements have been assigned a three-letter symbol for identification. This Reporting Identification Symbol (RIS) should be used in completing the transfer forms (AEC-741) in accordance with the instructions, and should be used in inventory reports and other correspondence with the AEC relative to such reports.

The symbol y7p has been assigned as the RIS for activities under License No. DDR-80.

Sincerely,

Linda N. Underwood
Administrative Officer
Office of the Deputy Director
for Field Operations
Directorate of Regulatory Operations
