Mr. Victor Stelle  
USNRC

Sir:

The media has almost no information about continuing efforts at Three Mile Island No 2. Please send an answer to my following questions:

1. What is the daily leak rate into the containment structure (presumably from the core)?
2. What are the internal temperatures of the core, pressurizer, etc.?
3. What is the measured and calculated thermal megawatt production at this time in the core (presumably from decay heat)?
4. What are the I concentrations in stack, site, fence line, LPT, etc.?

Marvin J. Lewis R. P. E.
