

UNITED STATES
ATOMIC ENERGY COMMISSION
WASHINGTON, D.C. 20545

August 22, 1969

Gentlemen:

In the course of proceedings leading to issuance of your construction permit, we transmitted to you the comments and recommendations of the United States Fish and Wildlife Service regarding the radiological environmental program for your nuclear reactor station. Included were recommendations of the Service regarding the preparation of preoperational and operational environmental radiological survey reports and the furnishing of copies of these reports to the Service. Other construction permit holders have received similar recommendations and requests for reports.

This is to request a summary report on the programs that have been carried out in response to the recommendations by the Fish and Wildlife Service, and in those cases where results of studies or surveys are available, copies of the actual reports. In addition, the Fish and Wildlife Service has requested that we send to them copies of all survey and study reports issued during the past three years on radiological monitoring of the aquatic environment near nuclear power and fuel reprocessing plants. Fifteen copies of all reports are needed for distribution within AEC and Fish and Wildlife Service. If this number of copies of the survey or study reports is not conveniently available, please let us know.

In addition to providing the radiological environmental monitoring program results, please indicate any measures you have taken to comply with other recommendations of the Fish and Wildlife Service. Those aspects addressed in response to Mr. Price's letter of June 27, 1969, on thermal effects may be included by reference.

Sincerely,

Peter A. Morris
for Peter A. Morris, Director
Division of Reactor Licensing
