Three Days Later

Now finally the people know the truth. There is a radiation leak at Three Mile Island, Nuclear Plant. Thanks for taking a three day risk with our lives before telling us there was a radiation leak in the air. If anyone has been over exposed to radiation let it lay on your heads. In the long run we are both the losers. So how does it feel being in the same boat as the people -

They tell us, stay in your houses, lock all windows and doors, tell me what good does it or did it do. Then another day they us our milk is contaminated and also our canned food. What are you doing about it the people want to know? Would you. Joseph Hendrie (Nuclear Regulatory Commission), Harold Denton, Jimmy Carter and Mayor Koch sleep in these houses, eat the food, send your children to those schools and drink the milk. What's good enough for the people is good enough for you.

The facts are: radiation did escape the plant at the Mill Island on March 27 1979 at 4:00 am, but the people were not informed until three days later. People began taking notice. People began taking their children out of school staying home locking all windows and doors as told to do so.

As the radiation level rose people began evacuating the area near the plant. The pregnant women began were taken out of the area and brought to a clean area of radiation because we know radiation does affect the fetus (Cradit is given where Cradit is do) if most say that was a smart move.

Then the people are informed and I quote from the Daily News.

"Hydrogen Peril Blast Fades at Plant"
Technicians reported that the danger of a hydrogen explosion inside the reactor at the Mill Island nuclear plant had diminished with the shunting of a potentially lethal hydrogen bubble.
Maybe know things will get back to normal

POOR ORIGINAL

As of evd my editorial if might add th
people will not be too happy paying for
the damage you're alone.

(Not so pleased)
