Subject: Loss of Pressurizer Level Indication

Dear Patsy:

B&W has received the attached request for information concerning the loss of pressurizer level indication at the B&W plants from the NRC Region III office. The Region III office is requesting this information based on their feeling that a loss of pressurizer level indication violates Criterion 13 - Instrumentation and Control which states "Instrumentation shall be provided to monitor variables and systems over their anticipated range for normal operations, for anticipated operational occurrences, and for accident conditions as appropriate to ensure adequate safety....".

Because of the tight schedule of this request, we would appreciate your prompt response to this request. If you choose to supply the requested information for Crystal River Unit 3, it would be desirable for the information to be in our hands by February 8, 1979 so we can compile the information and develop the proper strategy.

Present plans call for a strategy meeting on February 13, 1979 in Lynchburg to discuss the concern for those utilities that plan to attend the February 14, 1979 meeting. Please advise us of your plans

If you have any questions, please advise.

Very truly yours,

CT Fairburn
