Chairman Hendrie  
Dear Sir,

If you still believe that Metropolitan Edison should be licensed to operate any nuclear facility, it is our opinion that you, as nuclear regulators, should not be allowed to continue overseeing operating utilities. Most of the people who live in our area are convinced that the whole system is a sham, and more taxpayers are realizing that neither the utilities nor the government can be trusted to be truthful or to do what is best for us in this situation.

Your commission has clearly demonstrated a lack of good faith. Mr. Tolimer spoke with a group of interested and concerned people on the very evening of the day on which untreated water was released into the Susquehanna River. He failed to mention what had taken place.

We are infuriated by calm reassurances uttered by a bunch of flea-brained mechanics who have the insolence to suggest

POOR ORIGINAL

that we need only to be educated about (101)  
nuclear power in order to understand how  
silly we are.

Perhaps you could ask the N.A.S.A. experts  
who did such a great job on Skylab to assist  
the experts at Three Mile Island, or better  
yet, why don't you just revoke Met-Ed's  
license to operate and shut that bank of  
junk down permanently? My six-year old  
grandson asked me to include this wish  
in my letter to you.

Sincerely yours,  
John W. Tucker
