Mr. Harold R. Denton, Director
Nuclear Reactor Regulation
1717 H Street, Northwest
Washington, D. C. 20555

Dear Mr. Denton:

I am writing to ask your assistance in overturning the decision to stop issuing construction permits and operating licenses for nuclear power plants. It is my understanding that the freeze could last any where from six months up to two years.

I am sure you are aware there are seven nuclear units awaiting issuance of licenses that would allow them to begin commercial operations. A typical reactor displaces approximately 10 million barrels of oil a year. These nuclear facilities could be helping the United States offset the oil we are losing because of the Iranian shut-off.

I would appreciate your giving this request your serious consideration as the decision could have a profound impact on the entire nation.

Yours truly,

Alvin Furlow
