

TERA

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D. C. 20555

JAN 8 1980

Mrs. Connie Germeyer
2624 Creek Hill Road
Leola, PA 17540

Dear Mrs. Germeyer:

Thank you for your letter to the Commission concerning Three Mile Island. I regret that this answer to your letter has been delayed. The accident and its consequences have created a substantial increase in the agency's workload, which has prevented me from responding to you as promptly as I would have liked to.

Regarding the possible future operation of Three Mile Island Unit 1, the Commission has ordered that a public hearing be conducted to determine whether the unit should be operated and, if so, under what conditions restart of Unit 1 would take place. Prior to start of the hearings, the NRC staff will conduct a review of technical information concerning the restart of Unit 1. As part of this review, the NRC staff will conduct meetings with the licensee in the presence of the public, and the public will be given the opportunity to raise questions and to make statements. During the hearing, the technical issues which are appropriate to assure the public health and safety will also be addressed. In addition, the Hearing Board may consider the psychological impact of future operation on the nearby communities. A copy of the Commission Order which outlines the issues to be considered is enclosed for your information.

With regard to Three Mile Island Unit 2, the licensee has not yet submitted to the NRC a proposal for overall plant recovery, although the licensee is conducting feasibility studies. It is not possible at this time to determine when such proposals for recovery may be submitted or how much time will be needed for the required reviews and approvals in connection with Unit 2's recovery. I would note, however, that the licensee's authority to operate Unit 2, except for those actions necessary to keep the reactor shutdown, was suspended by Order of July 20, 1979.

The very small dose of radiation that was received by people in the area came from radioactive gases that escaped from the auxiliary building. The average dose of radioactivity received by the population within 50 miles of Three Mile Island was approximately 4 millirems. The maximum exposure to any individual was less than 100 millirems, which is less than the yearly dose each person receives as a result of natural background radiation. Doses at these levels result in less than one health effect over the lifetime of all people in this area, including pregnant women and babies in their wombs.

JAN 8 1980

I appreciate your concerns and assure you that every effort is being made to ensure the continued protection of the health and safety of the public, not only at the Three Mile Island Station, but also at all nuclear power plants.

Sincerely,

Harold R. Denton, Director
Office of Nuclear Reactor Regulation

Enclosure:
Commission Order,
Docket No. 50-289
