Dear Person:

I am going to be visiting the city of Harrisburg in a week or two and concerned about my present and future health and safety while I am in the city, with regards to any radiation I might receive from the Three Mile Island plant mishap. How much radiation will I receive? Are there any precautions I should take? Are there any areas I should avoid? I tentatively plan on staying just a few days. Should I shorten my stay? Any information you could furnish would be very much appreciated. Thank you.

Confused & Concerned,

David Pagnucco
