Dear Mr. Hendrie:

I'm a businessman in Tulsa.

Just a couple of things.

First, I don't think that any of those radioactive gases or water at the 3-Mile Island plant should be released. They should be put in containers and disposed of safely if that is possible.

In general, because of the radioactive wastes problems, I'm becoming more and more opposed to nuclear power stations, as are a number of my associates.

Please, (and if it costs, I'll send you a check) I'd like to have whatever published materials are available, both pro and con, about nuclear power, plants, and waste disposal. Please, could you send me these materials, even if there are a number of publications, booklets, pamphlets, etc.

Thank you so much,

Richard M. Strout
