

MEMO from:

MARSH BEERS

July 21, 1979

Dick

Here is a list of things that I noted at the simulator which were not seen before and very beneficial.

- 1) Solid Plant Conditions
- 2) Using HPI as cooling Mode
- 3) Natural Circulation Cooldown (one or two OTSG)
- 4) Multiple Casualties
- 5) Carry the casualty to completion - cold shutdown - Decay Heat or whatever is required
- 6) Better use of Procedures
- 7) Better Watch-standby - Each person has their job and one person in charge.
- 8) More thought put into ~~the~~ casualty by the instructor
- 9) Classes can still be more beneficial. Need more in depth lectures - the "why's"
