UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D. C. 20555

FEB 01 1980

SEE ATTACHED ADDRESSEE LIST

You are invited to participate in meetings to be held at Middletown, Pennsylvania on February 12 and Baltimore, Maryland on February 15 with representatives of the Nuclear Regulatory Commission (NRC) to discuss the programmatic environmental impact statement which is being prepared on the decontamination and disposal of radioactive wastes resulting from the March 28, 1979 accident at Three Mile Island Nuclear Station Unit 2. The purpose of these meetings is to provide an opportunity for public officials and interested members of the public to provide suggestions on the scope of the statement and the issues which should be considered.

The first session was held at the Forum in Harrisburg on January 29, 1980. Additional sessions are now scheduled as follows:

- February 12 (7:30 p.m.) Liberty Fire Hall
Adelie and Emaus Streets
Middletown, Pennsylvania

- February 15 (7:30 p.m.) University of Maryland
Baltimore Campus (just south
of 695 Beltway exit 12 at
Wilkins Avenue)
Baltimore, Maryland
Administration Building Lecture Hall #3

It would be helpful if oral comments at the meetings are confirmed in writing. Written comments alone are also welcome and they should be submitted by February 29, 1980 to Daniel R. Miller, Acting Director for the Division of Site Safety and Environmental Analysis, Office of Nuclear Reactor Regulation, U. S. Nuclear Regulatory Commission, Washington, DC 20555.

The Commission's Statement of Policy and Notice of Intent to Prepare the Programmatic Environmental Impact Statement was published in the Federal Register (page 67738) on November 27, 1979. As stated in that notice, the preparation of this statement "will be in keeping with the purposes

8002280096

of the National Environmental Policy Act to engage the public in the Commission's decision-making process, and to focus on environmental issues and alternatives before commitments to specific clean-up choices are made." Further details of the Commission's policy on this subject may be found in the enclosed copy of the notice. A copy of the staff's preliminary outline for the statement is also enclosed.

If further information is desired relative to the programmatic environmental impact statement or our plans for the meetings, please contact Paul Leech (301) 492-8444, Oliver Lynch, Jr. (301) 492-8438, or John Collins (717) 782-3955. Reference materials concerning TMI are available for inspection in the State Library Government Publication Section, Education Building, Commonwealth and Walnut Streets in Harrisburg; at the York College of Pennsylvania (c/o Ms. Margaret Atwood) in York; and at the Nuclear Regulatory Commission's office located in Downtown Mall-Store #14, 100 Brown Street, Middletown, Pennsylvania.

Sincerely,

Daniel R. Muller, Acting Director
Division of Site Safety and
Environmental Analysis
Office of Nuclear Reactor Regulation

Statement of Policy and Notice of Intent To Prepare a Programmatic Environmental Impact Statement

AGENCY: U.S. Nuclear Regulatory Commission.

ACTION: Statement of Policy.

SUMMARY: The Nuclear Regulatory Commission has decided to prepare a programmatic environmental impact statement on the decontamination and disposal of radioactive wastes resulting from the March 28, 1979 accident at Three Mile Island Unit 2. For some time the Commission's staff has been moving in this direction. In the Commission's judgment an overall study of the decontamination and disposal process will assist the Commission in carrying out its regulatory responsibilities under the Atomic Energy Act to protect the public health and safety as decontamination progresses. It will also be in keeping with the purposes of the National Environmental Policy Act to engage the public in the Commission's decision-making process, and to focus on environmental issues and alternatives before commitments to specific clean-up choices are made. Additionally, in light of the extraordinary nature of this action and the expressed interest of the President's Council on Environmental Quality in the TMI-2 clean-up, the Commission intends to co-ordinate its action with CEQ. In particular, before determining the scope of the programmatic environmental impact statement the Commission will consult with CEQ.

The Commission recognizes that there are still areas of uncertainty regarding the clean-up operation. For example, the precise condition of the reactor core is not known at this time and cannot be known until the containment has been entered and the reactor vessel has been opened. For this reason, it is unrealistic to expect that the programmatic impact statement will serve as a blueprint, detailing each and every step to be taken over the coming months and years with their likely impacts. That the planned programmatic statement inevitably will have gaps and will not be a complete guide for all future actions does not invalidate its usefulness as a planning tool. As more information becomes available it will be incorporated into the decision-making process, and where appropriate supplements to the programmatic environmental impact statement will be issued. As the decontamination of TMI-2 progresses the Commission will make any new information available to the public and to the extent necessary will also prepare separate environmental statements or assessments for individual portions of the overall clean-up effort.

The development of a programmatic impact statement will not preclude prompt Commission action when needed. The Commission does recognize, however, that as with its Epicor-II approval action, any action taken in the absence of an overall impact statement will lead to arguments that there has been an inadequate environmental analysis, even where the Commission's action itself is supported by an environmental assessment. As in settling upon the scope of the programmatic impact statement, CEQ can lend assistance here. For example should the Commission before completing its programmatic statement decide that it is in the best interest of the public health and safety to decontaminate the high level waste water now in the containment building, or to purge that building of its radioactive gases, the Commission will consider CEQ's advice as to the Commission's NEPA responsibilities. Moreover, as stated in the Commission's May 25 statement, any action of this kind will not be taken until it has undergone an environmental review, and furthermore with opportunity for public comment provided.

However, consistent with our May 25 Statement, we recognize that there may be emergency situations, not now foreseen, which should they occur would require rapid action. To the extent practicable the Commission will consult with CEQ in these situations as well.

With the help of the public's comments on our proposals we intend to assure, pursuant to NEPA and the Atomic Energy Act, that the clean-up of TMI-2 is done consistently with the public health and safety, and with awareness of the choices ahead. We are directing our staff to include in the programmatic environmental impact statement on the decontamination and disposal of TMI-2 wastes an overall description of the planned activities and a schedule for their completion along with a discussion of alternatives considered and the rationale for choices made. We are also directing our staff to keep us advised of their progress in these matters.

Dated at Washington, D.C. this 21st day of November 1979.

For the Commission,

Samuel J. Chilk,

Secretary of the Commission.
