Mr. Joseph M. Hendrie, Chairman
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Chairman Hendrie,

I am totally opposed to the proposed release of Krypton gas from Three Mile Island. The residents of the area should not be subjected to harm (All radiation is harmful!) for the convenience and financial stability of Met-Ed.

What plans have been made for increased monitoring and advance warning as the gas releases? This is the very least that should be done. But if you really have the health of the public in mind, you will not allow the planned releases, and thoroughly investigate any "accidental" releases.

Thank you.

Sincerely,
Timothy J. Murphy
