Nuclear Regulatory Commission  
Washington D. C.

Gentlemen:

Enough is enough! Now GPU is going to vent radioactive gases into the atmosphere over a one month period. You have bent over backward allowing this "public" utility to continue operation. TMI should be shut down. You are jeopardizing the financial security of millions by allowing this utility to operate. Think of all the factories, small businesses, homes, farms near TMI. Why not build coal generation plants in their place. Granted you may not be too interested in this as what would the NRC do if there was nothing nuclear to regulate.

Maybe all nuclear wastes should be shipped to the NRC in Washington. That would keep nuclear problems close to home. (your home not mine).

Please do not reward incompetence; shut down TMI.

Sincerely,

Cheryl Stearn
