Dear Sir:

I am in favor of the return to service of the unit at Three Mile Island.

From all the information available to me I am convinced that the ~~the~~ officers, technicians and other employees are competent and sincerely dedicated to providing the public with the best possible service.

Three Mile Island was constantly checked for safety hazards in accordance with existing safety regulations and the best scientific advice.

The President's Commission's concern about the health hazards of the accident is justified, but their conclusion that " the radioactivity released during the accident was so small that there will be no detectable additional cases of cancer, developmental abnormalities or genetic ill-health as a consequence" satisfies me that we have nothing to fear from operation of the unit.

For these reasons I favor the return to service of the TMI unit

Sincerely
Donald M. Smith
