

Dear NRC,

I have heard on the radio that Met-Ed is planning new releases of radioactive gasses from TMI as part of the cleaning up process. The nightmare of March 28 returns.

We cannot allow this to take place. We have suffered much psychologically and probably physically as a result of the accident this spring. How much are the citizens of Pennsylvania required to stand?

I am not a nuclear scientist and do not pretend to understand the nuclear waste clean-up process; but there must be some other way to go about it than to place more radioactive waste gasses into an already overloaded atmosphere.

Please, please do everything in your power to see that these releases are stopped before Pennsylvania is doomed forever! For the sake of the mental and physical health of all Pennsylvanians, our economy, our tax base, etc. we cannot stand for this new disaster!

I am an expectant Mother and if the releases are not stopped I will plan to leave my home each time a release is announced. There are many who will do the same. What kind of a future is this for us, our born and unborn children, and our beautiful state?

8003170098

Please help. There must be some

alternative. Wont you do everything you can
to find it?

Thank you for your time and for reading
my letter.

Sincerely Yours,
Mrs. Glenda Bixler
