Dear Sir:

I live approximately three miles from a nuclear plant, so I'm concerned with the dangers it may bring. I'm interested in the method of storing the wastes. After it is stored in the holding tank, where will it go? What will happen when the tanks are full? Plutonium and other strongly active materials take years to lose their activity. How will you handle this?

I would appreciate any information you can give me on this subject.  
Thank you.

Yours truly,  
*Charlette Morrison*
