UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
WASHINGTON, D. C. 20555

FEBRUARY 04 1980

Docket No. 50-338

Mr. W. L. Proffitt  
Senior Vice President - Power  
Operations  
Virginia Electric & Power Company  
P. O. Box 26666  
Richmond, Virginia 23261

Dear Mr. Proffitt:

Subject: Safety Evaluation Report for the Steam Generator Inspection and  
Maintenance at the North Anna Power Station, Unit No. 1

We requested on November 30, 1979 that you submit a report on the first refueling  
steam generator inspection at North Anna, Unit 1.

Your submittal, dated December 10, 1979, for the North Anna, Unit 1 steam generator  
inspection has now been reviewed and evaluated. Our Safety Evaluation Report  
regarding this matter is provided in the Enclosure to this letter.

It is our conclusion that the steam generator inspection at North Anna, Unit 1 was  
adequate to establish the present condition of the steam generators. Also, the  
preventive maintenance (tube plugging) performed as a result of inspection provides  
reasonable assurance that the North Anna, Unit 1 steam generators can continue to  
operate without impairing the health and safety of the public.

Finally, we conclude that the steam generator inspection and maintenance at North  
Anna, Unit 1 has been performed in a manner consistent with the Commission's  
requirement for maintaining occupational exposures as low as reasonably achievable  
(ALARA).

Sincerely,

A. Schwencer, Chief  
Operating Reactors Branch #1  
Division of Operating Reactors

Enclosure:  
Safety Evaluation Report
