(in re: Docket #50-320)

Sir:

It seems evident, on the face of contents of the Environmental Assessment and with only a little background knowledge, that a public hearing would surely be in order before final action on modified Technical Specifications. There is a growing sentiment in the public against having actions forced on it, as in case of Epicore II. I can appreciate the need for expeditious actions, both legal and technically, for the clean-up of TMI-2, but not at the cost to the health and safety of citizens in our area.

Jeane J. Crumley

Sincerely,
Jeane J. Crumley
