

UNITED STATES NUCLEAR REGULATORY COMMISSION WASHINGTON, D. C. 20555

NRC PUBLIC DOCUMENT ROOM

MAR 1 9 1980

Ms. Helen Heitmueller Box 2238, RD#2 Etters, PA 17319

Dear Ms. Heitmueller:

I am writing in response to your Christmas card to Chairman Ahearne regarding the closing of Three Mile Island. I regret that this answer to your letter has been delayed. The accident and its consequences have created a substantial increase in the agency's workload, which has prevented me from responding to you as promptly as I would have liked to.

With regard to Three Mile Island Unit 2, the licensee has not yet sent to the NRC a proposal for plant recovery, although the licensee is conducting feasibility studies. It is not possible at this time to determine when such proposals for recovery may be submitted or how much time will be needed for the required reviews and approvals in connection with Unit 2's recovery. I would note, however, that the licensee's authority to operate Unit 2, except for those actions necessary to keep the reactor shut down, was suspended by Order of July 20, 1979.

As for Three Mile Island Unit 1, the Commission has ordered that a public hearing be conducted to determine whether the facility should be operated and, if so, under what conditions restart would take place. Prior to start of the hearings, the NRC staff will conduct a review of technical information concerning the restart of Unit 1. As part of this review, the NRC staff will conduct meetings with the licensee in the presence of the public, and the public will be given the opportunity to raise questions and to make statements. During the hearing, the technical issues which are appropriate to assure the public health and safety will also be addressed. In addition, the Hearing Board may consider the psychological impact of future operation on the nearby communities. A copy of the Commission Order which cutlines the issues to be considered is enclosed for your information.

Please note that no radiation induced fatalities have occurred as a result of the Three Mile Island accident. The President's Commission investigating the accident said in the overview of their report that, "We conclude that the most serious health effect of the accident was severe mental stress, which was short-lived."

A team of investigators from the Nuclear Regulatory Commission, the Environmental Protection Agency, and the Department of Health, Education and Welfare calculated the doses to the people living within 50 miles of the Three Mile Island site and estimated the number of new cancers that would result from the exposure to the radioactivity that leaked out of the plant. The team published their work in a report entitled, "Population Dose and Health Impact of the Accident at the Three Mile Island Nuclear Station" (NUREG-0558). They concluded that the offsite collective dose associated with radioactive material released from March 28, 1979, to April 7, 1979, represents minimal risks (that is, a very small number of additional health effects to the offsite population). Enclosed for your information is a summary of NUREG-0558.

I appreciate your concerns and assure you that every effort is being made to ensure the continued protection of the health and safety of the public, not only at the Three Mile Island Station, but also at all nuclear power plants.

Sincerely.

Harold R. Denton, Director

Office of Nuclear Reactor Regulation

Encl: Order and Notice of Hearing dated 8/9/79

Summary of NUREG-0558
