

UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
WASHINGTON, D. C. 20555

APR 11 1980

Mrs. Margaret H. Westover  
8544 N. Irish Road  
Otisville, Michigan 48463

Dear Mrs. Westover:

This is in reply to your letter of January 30, 1980, to President Carter about proceeding with nuclear power.

A statement by President Carter on December 7, 1979, about the Report of the President's Commission on the Accident at Three Mile Island (the Kemeny Commission) included the following:

"Finally, I would like to discuss how we manage the transition period during which the Kemeny recommendations are being implemented. There are a number of new nuclear plants now awaiting operating licenses or construction permits.

"Licensing decisions rest with the NRC and, as the Kemeny Commission noted, it has the authority to proceed with licensing these plants on a case-by-case basis, which may be used as circumstances surrounding a plant dictate. The NRC has indicated, however, that it will pause in issuing new licenses and construction permits in order to devote its full attention to putting its house in order. I endorse the approach the NRC has adopted, but I urge the NRC to complete its work as quickly as possible, and in any event no later than six months from today.

"Once we have instituted the necessary reforms to assure safety, we must resume the licensing process promptly so that the new plants which we need to reduce our dependence on foreign oil can be built and operated."

The Nuclear Regulatory Commission is committed to protect the public health and safety. The Three Mile Island accident resulted in a need for changes in the approach to safety. The Nuclear Regulatory Commission has found that actions recommended by its own staff and by the President's Commission on the Accident at Three Mile Island in the areas of human factors, operational safety, emergency planning, nuclear power plant design and siting, health effects, and public information are necessary and feasible.

Mrs. Margaret H. Westover

APR 1 1980

At this time we are preparing for review and approval by the Nuclear Regulatory Commission an Action Plan that will specify the precise actions to be taken. It will include new or improved safety objectives, detailed criteria for their implementation, and various implementation deadlines. As soon as the Action Plan is completed and approved, the resulting regulatory requirements will be transmitted to all utilities concerned.

It is recognized that there will be a significant effect on the availability of power generating capacity if those plants now in the final stages of construction do not receive operating licenses by the dates previously anticipated, and every effort is being made to avoid unnecessary delays. With this objective, the Commissioners approved on February 28, 1980, the issuance of an NRC license to the Tennessee Valley Authority for the Sequoyah Nuclear Plant Unit 1 to load fuel and, under specified conditions, to operate at low power levels for testing. Several other similar cases are under consideration.

Sincerely,

A handwritten signature in cursive script, appearing to read "Harold R. Denton".

Harold R. Denton, Director  
Office of Nuclear Reactor Regulation

411

1-30-80

Dear President Carter:

My husband  
and I are very concerned about  
the nuclear moratorium.

How are  
we to solve our energy crisis  
if we ban nuclear power which  
is available now, not some time  
in the 21<sup>st</sup> century?

Since nuclear  
power production will allow  
if utilities are permitted to  
get on with the building of  
plants and the application  
of safety standards we have  
now and those we have  
from experience.

Yours very truly,  
Margaret H. W. Moore

M. W.
