To whom it may concern -

I was shocked and upset over this past week's events. As I understand it, the real public health effect cannot be evaluated for 10-25 years, when cancers begin to develop. Is this true to your knowledge? How can industry officials so flippantly say no health hazards exist. Already pregnant women have been exposed - a dangerous situation.

I have 2 requests and an opinion to express now:

- ① Please send me copies of your regulations and recommendations for evacuations in case of nuclear accidents. There is one going up outside of this community and I'm concerned.
- ② Please send your report on the 3-mile plant accident when it is available.

I feel deeply now that your commission must halt construction of any plants with similar systems to 3 Mile Plant - and temporarily close down operating ones until you have thoroughly re-evaluated the situation, and can truly guarantee our public safety. To do anything less would be highly irresponsible. How much closer to catastrophe must we move before we learn?

Thank you.

Sincerely,

Nena Mohit
