Nuclear Regulatory Commission

488

Dear Mr. Hendrie:

I understand that radioactive waste will soon be transported via truck across the country to Hanford, Washington.

How many trips will it take, before there is an accident. How much longer is the NRC going to gamble with the lives of the very people you supposedly serve? What are the odds that one of these trucks will crash.

I am an insurance adjuster. I know the odds. While accidents occur as often, as ~~our~~ our hearts beat. Soon an accident will stop the heart beat of nuclear power, so that the human heart can beat in place.

I would like to know about the safety measures which will

be taken to ensure — beyond
a shadow of a doubt — that
the trucks carrying radioactive
wastes will safely arrive
at their destinations!

Thank you.
