DOCKET NUMBER  
PETITION RULE PRM-50-26

(2)

March 3, 1980

Secretary of the Commission  
U. S. Nuclear Regulatory Commission  
Washington, D. C. 20555

Attn: Docketing and Service Branch

Gentlemen:

I wish to comment on the petition for rulemaking filed before the Commission by William K. Watson, assigned Docket No. PRM-50-26 and published on page 10360 of the Federal Register for Friday, February 15, 1980.

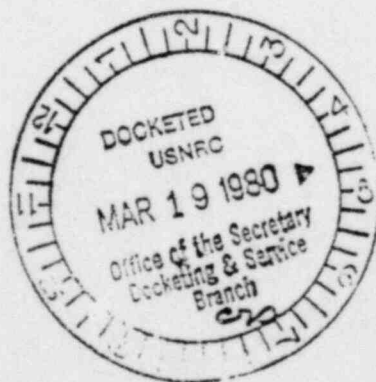

I am opposed to the petition as being of no practical value and being counter-productive. If we are ever under attack by nuclear weapons having a yield of 5 megatons or less, it isn't going to make much difference how our nuclear storage facilities are constructed. This will be low on our list of problems.

It is my guess that the petition was inspired by the "no nukes" kooks who are doing everything they can do to defeat our Country's efforts to become energy independent. It's obvious that the revision proposed by the petition would further increase the cost and delay the construction of badly needed power plants and for no really useful purpose.

Yours truly,

*Edmonds Love*
