James Kennedy
Nuclear Regulatory Commission
Regarding: SECY 90-318 LLRW PAATTB

① The facility that "makes the waste" is already contaminated and should store the "waste" generated at that facility - They already deal with it and are set up for handling and storage - Make it permanent - Shut them down when full.

② None! The facilities have the necessary storage to deal with the stuff before its waste they can keep it after its "waste". People living in the area surrounding the facilities already know they are there and accept them. ② Welcome the income they receive if they work there at the facility. ③ Are already exposed and accept their death sentence. No more contaminated land!

③ **NOI ON SITE STORAGE ONLY!** They make it, they can deal with it, they can puke it!
NO dump in uncontaminated farm land - save it to feed the people!

1/0

④ The generators of the WASTE - bought the stuff before it was "waste" its solely theirs! They have the capacity to store and keep it before it is "waste"! They can keep it after its waste.

⑤ Whoever generated the waste already owns it, they bought it before it was made into their "waste product"

The makers (facilities) should remain responsible for the "waste product" for its time of radioactive life until its no longer radioactive.

⑥ All state and Local laws should make the owner (maker) of waste responsible - they bought it to use, used it, they can keep it!

⑦ The Commission should tighten up its dealings - No dumping down sewers or curb side trash as allowed - GAO Report 3/90 RCED90-96 - Your Not stopping Contamination -

NO BRC - ON SITE Storage Monitered by you (NRC) or ^{and} a citizen's group to help you (NRC) do your job!
ON SITE IS the ONLY Solution

⑧ Generators keep it on site the way its made - no mixing - in their facilities - separated!

Its time to wake up to the fact the people are being educated Not kept Ignorant of leaks & hazards, Nuclear Power is not clean, cheap or safe! Shut down!
