Gentlemen:

This refers to the routine, unannounced radiation safety inspections conducted by Mr. Wesley L. Holley of this office on September 14 and 15, 1989, of the activities authorized by NRC Byproduct Material Licenses 05-00046-13 and 05-00046-15, and to the discussion of our findings held by the inspector with members of your staff at the conclusion of the inspection.

The inspection was an examination of the activities conducted under the license as they relate to radiation safety and to compliance with the Commission's rules and regulations and the conditions of the license. The inspection consisted of selective examinations of procedures and representative records, interviews of personnel, independent measurements, and observations by the inspector.

During the inspections, the inspector reviewed the organizations of the nuclear medicine and the teletherapy departments and also the effectiveness of the Radiation Safety Committee and the Radiation Safety Officer in managing the various aspects of your radiation safety program. The inspector observed that these individuals appeared to function well in their respective roles and generally directed program audits that adequately identified and corrected potential safety problems. Within the areas inspected, no violations were identified. The inspector observed that licensed material was adequately secured and used in accordance with applicable Commission regulations. Interviews of the licensee's staff demonstrated that they were informed regarding operating and emergency procedures pertaining to the use of radioactive material in nuclear medicine and teletherapy.
