NOTE TO: Jim Partlow
FROM: Darrell Huff
THRU: Ron Brightsen
SUBJECT: FWHC PLAN CHANGES AND LICENSE CONDITION CHANGES - TEXAS INSTRUMENTS

In their letters dated November 26, 1979; February 27, 1980; and May 27, 1980, Texas Instruments, Inc. submitted a number of page changes to their Fundamental Nuclear Material Control Plan. These involved changes in the TI organization, changes made to improve the reporting of and response to independent reviews and audits (requested by our letter to TI dated February 15, 1980), and various other minor changes which do not decrease the effectiveness of the material control and accounting program. I have reviewed the subject changes and have found them to be acceptable. Therefore, I recommend that we approve them by sending the attached letter.

For some time now, the option of requiring TI to use their own measured values for U308 receipts in their accounting system has been pursued. As the result of correspondence with DOE on this matter, the decision was made to allow TI to continue to use shipper's values. Currently, License Conditions 6.4 and 6.5 are the conditions which allow this practice; however, since TI has incorporated the specific requirements of these two conditions into their present FWHC Plan, I am now consolidating them into a single concise notwithstanding license condition (new L.C. 7.3). The wording for this new condition is contained in the attached letter.

In addition to the above, several of TI's present license conditions have either been incorporated into the FWHC Plan or are merely restatements of the requirements already imposed by the regulations. In order to eliminate these redundancies, I believe that we should delete License Conditions 1.1, 2.3, 3.1, 3.1.1, 3.2, 6.3, and 8.1; modify License Condition 5.1; and renumber License Conditions 2.4 and 3.1.2. Subsequently, I have also made these changes in the attached letter.
