

UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
WASHINGTON, D. C. 20555

JUL - 9 1980

Docket No. 70-1308  
License No. SNM-1265

MEMORANDUM FOR: L. C. Rouse, Chief  
Advanced Fuel and Spent Fuel Licensing Branch

FROM: A. T. Clark, Jr.  
Advanced Fuel and Spent Fuel Licenising Branch

SUBJECT: MEETING WITH THE GENERAL ELECTRIC COMPANY REGARDING  
JANUARY 23, 1980 REQUEST FOR LICENSE AMENDMENT.

On June 10, 1980 the subject meeting was held at Silver Spring, Maryland. A list of meeting participants is attached. The General Electric Company representatives requested the meeting to discuss their perspective of the second part, (b), of the subject request. Part (a) of the request was not discussed.

The General Electric Company wishes to perform certain tests to develop or confirm information related to the storage of spent fuel only. They believe that much of this information can be obtained without significantly changing radiological or environmental safety at the Morris Operation. Each change, test, or experiment would be carefully reviewed by the plant safety committee to determine whether or not the change, test or experiment was an unreviewed safety question or could significantly affect the environment. Information on the tests would be recorded and an annual report submitted to the Nuclear Regulatory Commission such as is presently done for changes, tests, and experiments under 10CFR Section 50.59 for nuclear power reactors.

The GE representatives also indicated that they had submitted a description of a proposed expansion of the basin pump room for our information.

A handwritten signature in cursive script that reads "A. Thomas Clark, Jr.".
