UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
WASHINGTON, D. C. 20555

July 2, 1980

Docket No. 50-213

Mr. W. G. Council, Vice President  
Nuclear Engineering & Operations  
Connecticut Yankee Atomic Power Company  
P. O. Box 270  
Hartford, Connecticut 06101

Dear Mr. Council:

We have completed our review of your plans to implement item 2.1.4 of the Category "A" Lessons Learned requirements, as stated in your submittal of May 23, 1980. In that letter you committed to remove the containment isolation valves associated with the reactor coolant pump auxiliaries from the high containment pressure and safety injection system actuation circuits, and to reclassify these auxiliaries as essential systems prior to startup from your current refueling outage. As a result of the changes, these systems would no longer be automatically isolated in the event of a high containment pressure or a safety injection signal. We have determined that these measures constitute an acceptable resolution of the concerns we expressed in our letter of May 7, 1980, regarding Lessons Learned implementation.

Sincerely,

*Dennis M. Crutchfield*  
Dennis M. Crutchfield, Chief  
Operating Reactors Branch #5  
Division of Licensing
