

October 16, 1989

Docket No. 50-395

LICENSEE: South Carolina Electric & Gas Company

FACILITY: V. C. Summer Nuclear Station, Unit No. 1

SUBJECT: SUMMARY OF MEETING WITH SOUTH CAROLINA ELECTRIC & GAS COMPANY

GENERAL

On October 5, 1989, the staff of the Office of Nuclear Reactor Regulation (NRR) met with representatives of the South Carolina Electric & Gas Company (SCE&G) to discuss the various strategies for addressing steam generator tube problems at the V. C. Summer Nuclear Station and the amendments associated with these strategies. The meeting was held at the NRR offices in Rockville, Maryland. A list of those persons who attended the meeting is included as Enclosure 1.

DISCUSSION

The licensee presented their integrated program for addressing the continual degradation of the V. C. Summer steam generator and their rationale for having these options available for the March 1990 refueling outage. The licensee presented the impact on the Summer Nuclear Station if the options L* and F* are not available for the refueling outage. The licensee also discussed the need for the B&W short sleeve amendment.

As a result of the meeting it was determined that (1) additional data reflecting industry experience with F* is necessary for the F* amendment, (2) a meeting will be held between SCE&G and the NRC to discuss some of the technical aspects of L*, most notable the adequacy of the use of eddy current testing to determine steam generator tube crack size and orientation and (3) the NRC will investigate ways to handle the B&W sleeving amendment request in a manner to ensure that resolution has been reached on its use prior to the March 1990 refueling outage.
