Subject: Notice of Violation

Gentlemen:

Reference the alleged violations put forth in your letter dated September 14, 1989.

Violation A: Richard Thomas was listed as the Radiation Safety Officer and Mark Erickson was in the process of taking over as Radiation Safety Officer. The amendment to the license had not been executed replacing Richard Thomas as Radiation Safety Officer, but was to take place upon completion of training by Mr. Erickson. Mr Erickson was informed if safety procedures and emergency activities as was Mr. Thomas. Although not technically designated as RSO, Mr. Erickson was able to function in the role of RSO, providing increased coverage of radioactive material handling for the company. An amendment has been applied for to designate Mr. Erickson as RSO.

With regards to designating users of the licensed material, it was not understood that a written designation of users was required above and beyond completion of the manufacturer's training. A list of designated users has been issued and a record is on file.

Violation B: Physical inventories had not been recorded for the four gauges as required in our materials license. Between our people in Fairbanks and our Anchorage office, we have confirmed all the gauges are locked in storage and will remain so until such a time that they can be transported to Anchorage.

Violations C: The gauges licensed for use by Wilder Construction had not been leak tested on the six-month intervals required or when removed from storage. Wilder Construction has acquired leak test kits for the gauges in its possession. The tests will be completed when time allows for the transport of the gauges to Anchorage. Until then, the gauges will remain in locked storage.

Violation D: Wilder Construction does not have records beyond invoices and shipping papers denoting the date of receipt of the gauges it possesses. It was an oversight that such a record was required. Wilder Construction cannot pinpoint the date of receipt of its gauges, but can approximate fairly closely from packing receipts and invoices. A detailed research of records will be conducted this winter to try to find further records of receipt.
