Dear Sir:

This is to inform your office that the below listed personnel holding inactive Senior Reactor Operator (SRO) licenses on the Brunswick units have reactivated their licenses for the purpose of fuel movement. Their responsibility will be the SRO on the refuel floor and their license will remain active for fuel movement until December 31, 1989. If it is required to extend the license into 1990 to complete the refuel for the current outage, appropriate requalification watches will be stood.
